

Section 01

Screening questions

1.1

General exclusions

The following cases are excluded from NAP7, please do not report. Discuss with Local Coordinator or see the website for further information if required.

- Patients already in cardiac arrest before an anaesthetist attends
- Planned defibrillation and/or chest compressions during electrophysiological studies/procedures
- Synchronised DC shock for cardioversion
- Cardiopulmonary bypass from arterial cannula insertion to removal
- ASA 6 patients (declared brain-dead patient going for organ donation)

Screening questions

Please answer the following questions to confirm the case is eligible for inclusion in NAP7.
Please only submit **one form per patient per 24-hour inclusion period**.

Did anaesthesia care start between 16 June 2021 00:00:00 and 15 June 2022 23:59:59? (Pick One)

- Yes
 No

1.2

Did the patient receive 5 or more chest compressions and/or defibrillation? (Pick One)

- Yes
 No

1.3

Did the cardiac arrest occur after the start of anaesthesia care? (Pick One)

- Yes
 No

1.4

Can you confirm the patient was NOT an adult anaesthetised solely for critical care and NOT intubated pre-hospital without the use of drugs? (if child see Q 1.7) (Pick One)

- Yes
 No

Filter questions

1.5

Please answer the following questions to ensure you are shown the correct parts of the case entry form.

Did the event occur during or after a procedure under the care of an anaesthetist requiring one or more of:

- general anaesthesia
- regional anaesthesia
- sedation
- managed anaesthesia care (anaesthetist monitoring only)

(Pick One)

- Yes
 No

1.6

Did the event occur during the perioperative period (i.e. from WHO sign-in or first hands-on pre-procedure intervention until 24 hours at procedure)? (Pick One)

- Yes
 No

1.7

Does the case meet any of the special inclusion criteria? (Pick One)

- Critically ill child anaesthetised for retrieval or transfer to another hospital
- Emergency department (only select this for patients in whom a surgical intervention/interventional radiology/interventional cardiology procedure is planned or likely who then arrest before this is possible)
- Obstetric analgesia (including remifentanil PCA)
- Regional block performed by anaesthetist outside of theatre (non-obstetric)
- No

1.8

What type of hospital did the event occur in? (Pick One)

- NHS
- Independent - private hospital
- Independent - wing or ward within NHS hospital
- Independent - treatment centre

1.9
